RE: Excavation Activities at the North County High School Football Field, EPA ID 0005

Dear Mr. Lankford,

This letter gives approval for the North County High School to proceed with the excavation of the football field with the contractor of their choice. Please contact me when you have completed the excavation so that EPA can test the subgrade soil. Excavated soil should be tarped and transported directly to the EPA designated soil repository, located at the Bonne Terre East Tailings Flat. I have enclosed a map of the soil repository for your records. You should coordinate the soil disposal with me as well. At the end of the excavation activities all trucks should be properly decontaminated to minimize the spread of lead-contaminated soil onto other locations. Please feel free to contact me if you have additional questions or concerns.

Sincerely,

Jason Gunter
EPA Remedial Project Manager
